

CELEST AUSTIN, MD, PHD FOUNDER/CEO

While growing up with her autistic sister, Amanda, Celest Austin grew to appreciate her sister's way of thinking. Dr. Austin was alarmed how most resources available did not nurture her sister's unique way of thinking.

From then on, Dr. Austin decided to dedicate her life to autism and studied the uniqueness of autism. After obtaining her MD/PhD, Dr. Austin founded GoManda, inspired by the unique learning style of Amanda, GoManda is a company nurtures the unique mind of autism. GoManda has created a platform that teaches vocabulary using strength-based teaching - a teaching method that works with autism's unique learning style rather than against it.

By third grade,

58%*

of autistic children struggle with vocabulary comprehension.

Let's change this.

*prepandemic number

TEACHING VOCABULARY THE RIGHT WAY

Evidence-Based Practice

400% Increase in Vocabulary

Strength-Based Approach

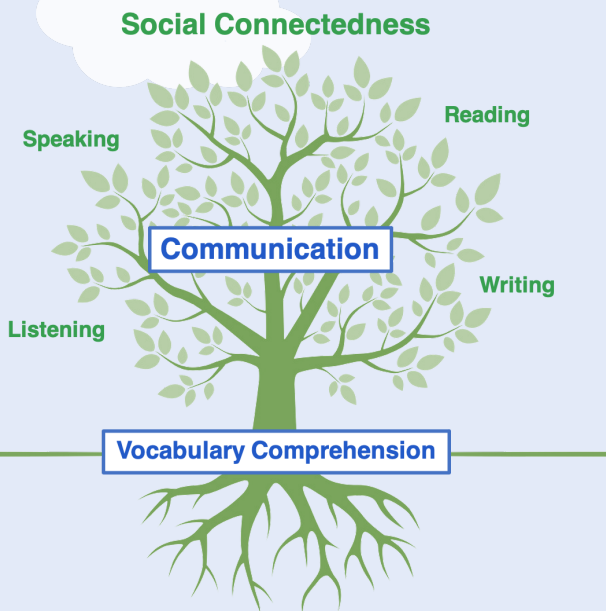

Save 90% more time as an educator

Select from multiple categories, each one is filled with relevant nouns, highlighted when your child masters them

Each lesson is about showing the different textures, colors, and materials of a noun with high quality images

Vocabulary is the foundation to all communication and helps any child connect to their world.

Science shows that most autistic learners (and other neurodivergent learners) have a hyperfunctional brain that benefits from seeing multiple variations of a noun. Without learning vocabulary properly, autistic learners can fall behind in literacy, career preparedness, and even confidence - until now.

Real-time data is automatically collected during each lesson and easily exported
